Building Word Recall from Everyday Situations, Susan Breiding

This reproducible manual is the perfect resource to restore a client's functional speech. Save hours of preparation time and give clients the tools they need to accelerate progress. The practical and progressive sequence for building word recall skills move clients from automatic responses to purposeful speech. All activities can be adapted to the individual needs of clients displaying mild, moderate and severe impairments. Twelve target skill areas include yes/no usage, word association, sentence completion/daily life, sentence/question, sentence/completion, contrasting pairs, people, objects, categories, functions, "wh" questions, describing yourself, sequencing events, describing places.

What Is It Like to Have Trouble Communicating? A Series of Stimulation Activities to Educate Family, Friends and Caregivers by Jacqueline Hinckley, Ph.D. A bridge to greater understanding, sensitivity and empathy. Simulations create experiences similar to what it is like to have an acquired communication problem in listening, reading, writing, speaking with over 25 activities. Reproduce forms and "Tips and Strategies for Communicating" for use in counseling individuals or groups. A valuable adjunct to family education, community meetings, training student clinicians and support personnel, corporate speech practice, and in Better Hearing and Speech Month activities.

RA888265 What Is It Like to Have Trouble Communicating

Aphasia Diagnostic Profiles (ADP) by Nancy Helm-Estabrooks. A quick, efficient and systematic method of assessing language and communication impairment associated with aphasia. Nine brief subtests create composite scores while profiles address critical areas of the client's performance. The severity profile indicates overall severity and specific strengths and weaknesses. Error profiles identify the communication value of a client's response. Behavioral profile indexes the client's overall social-emotional state during testing. Administered in 40 to 50 minutes. *Examiner's manual, stimulus cards/letter board, 25 record forms.*

Early Aphasia Therapy, *Emily Pietz Porter*. A concise, organized source for the most common activities used in early aphasia therapy. This structured, easy-to-use, picture-based program provides a hierarchy of difficulty that is increased systematically. Activities include singing and rhythm, automatic speech, phrase completion, naming, confrontational sentence formulation, and responsive and open-ended sentence formulation. A standard cueing sequence adds consistency, instructions for therapist and caregiver are clear, and carryover activities are easy to copy and use. Large print and clear illustrations are easy for client to identify and are appropriate for all ages.

Aphasia Therapy Workbook, Vol. 2

Manual of Aphasia and Aphasia Therapy, Second Edition, *Nancy Helm-Estabrooks and Martin L. Albert*. This manual covers the latest therapies and technologies for analyzing the neuroanatomy of language in the study of brain-language relations. In a clinically relevant, straightforward manner this text describes the neuronanatomical and neuropathologic bases and differential diagnosis of aphasia. Covers topics ranging from neurologic, neuropsychologic, and language exams; the development of individualized treatment programs; the implementation of existing methods; and the neuropsychiatric, psychosocial, to the legal aspects of aphasia.

RA82183

Manual of Aphasia and Aphasia Therapy

Workbooks for Aphasia by *Susan Howell Brubaker*.

Basic Level Workbook. Provides a large assortment of low-level drills for clients with limited or emerging reading skills. An ideal starting point that requires no spelling or writing ability.

Workbook for Aphasia, Second Edition. Classic treatment book for clients with mild to moderate language and cognitive deficits. This comprehensive workbook offers a diverse range of exercises adaptable as stimulus or drill items for individual sessions, group interactions or independent use.
