

O'Connor Tweezer Dexterity Test consists of board, pins, and manual with norms. Approximately 8" x 4" x 1".

RA5517

Test: O'Connor Tweezer Dexterity Test

Look to the Left!, *Mary Evanofski, OTR*. Determines which quadrant or quadrants of vision have been affected by brain damage. Helps clients learn to compensate for vision loss. 30 graded activities involve drawing, puzzle solving, copy activities, and reading exercises.

RA5820

Book: Look to the Left!

Memory Fitness Suggestions help understand the basics of memory, the importance of paying attention, being organized, and having a positive attitude. Gives a better understanding of what impacts the ability to remember, treatment for individuals with memory problems including early stage dementia, and ways to enhance memory fitness. Learn how stress and lifestyle choices can impact recall. Memory strategies, successful aging, and memory aerobics make this handy memory guide a good resource for all ages.

RA82619

Memory Fitness

Retraining Cognition: Techniques and Applications by *Frederick J. Parente and Douglas J. Herrmann* Provides techniques for teaching problem solving, decision making, concept learning, organization, planning and reasoning skills in general. Describes how the human information processing system works and how it may fail after an injury. Contents include models and theories of cognitive rehabilitation, assessing the multimodal system, retraining thinking skills, passive modal interventions, and support ideas.

Includes 275 pages, hardcover

RA80681

Retraining Cognition: Techniques And Applications

Sourcebooks for Speech, Language, and Cognition*Susan Howell Brubaker, M.S., CCC-SLP*

Target areas classify exercises by type of question and range from low to high level. They are based on user ability ranging from nonverbal exercises to longer answers that require planning of several sentences. Each page of 20 questions of the same construction and type is read to client. 400 pages, hardcover.

RA82451 Sourcebook for Reception and Expressive Language Functioning

**Sourcebooks for Speech, Language, and Cognition***Susan Howell Brubaker, M.S., CCC-SLP*

Book 3 represents a lower level of difficulty, with higher frequency vocabulary and easier concepts used in conjunction with target areas of association, comprehension, knowledge, naming formulation, and logic. 198 pages, hardcover.

RA80189 Book 3 - Sourcebook for Reception and Expressive Language Functioning

**Cognitive Reorganization—3rd Edition, Sharon Holloran**

This completely updated handbook is now organized into one volume. A highly flexible program that includes hundreds of fresh new contemporary stimuli toward memory, attention, and orientation deficits. These adult-oriented activities are designed to improve the cognitive-linguistic skills of TBI clients. Includes both cognitive reorganization and practical math of earlier version. Activities are organized into 10 major headings. The clear print makes it easy for clients to respond. Over 4,200 stimuli and reproducible information sheets. 350 pages, soft cover.

RA82623 Cognitive Reorganisation

**The Cognitive Assessment of Minnesota, Ruth A. Rustad, Terry L. DeGroot, Margaret L. Jungkunz, Karen S. Freeberg, Lauren G. Borowick, and Ann M. Wanttie.**

Identify cognitive abilities in less than an hour and convert the assessment into meaningful clinical goals. This standardized test quickly identifies general problem areas in a concise hierarchical approach. Covers four areas of processing and explains the sequence of skills necessary to accomplish a task. Evaluates neurologic impairments with 17 subtests of attention span, memory, visual neglect, temporal awareness, recall/recognition, auditory memory and sequencing, simple math, and safety and judgement.

RA81563 Test: Cognitive Assessment of Minnesota

RA81564 Forms: Cognitive Assessment of Minnesota

**BaFPE (Bay Area Functional Performance Evaluation)**

Accurate assesment of function in task-oriented and social interaction situations. Useful outcome documentation for discharge planning.

RA8812 Test: Bay Area Functional Performance Evaluation

Ross Information Processing Assessment (RIPA-2), 2nd Edition, Deborah Ross-Swain.

Quantify cognitive-linguistic deficits, determine severity levels for each skill area and develop rehabilitation goals and objectives. Provides quantifiable data for profiling 10 key areas basic to communicative and cognitive functioning. Test items have proven to be unbiased to age or gender. Includes severity levels and treatment goal development in immediate memory, recent memory, temporal orientation--recent and remote, information recall, environment orientation, organization, spatial orientation, problem/reasoning, and auditory processing.

RA80186 Test: Ross Information Processing Assessment, 2nd Ed.

Cognitive Retraining Workbooks, Mary Evanofski.

Attention Workbook, Volume 1 Includes tasks and activities to support processing, concentration, discrimination, filtering, and persistence.

Memory Workbook, Volume 2 Develops rote memory skills using rhythm and rhyme, categorization, visual imagery, reading comprehension, and visual-spatial memory tasks.

Problem Solving Workbook, Volume 3 Includes visual, verbal, and mathematical problems used to stimulate fundamental problem solving.

RA5822 Memory Workbook
RA5823 Problem Solving Workbook

Cognition Cards

These photo card decks contain 25 up-to-date images that are completely different from those in the SR kit. They can be used alone for a variety of activities or as additional cards with the SR kit.

RA82764 Cognition Cards, Problem Solving

Problem Solving A deck of images of pictorial absurdities including fishing in a bathtub, wearing a lampshade on one's head, kayaking with barbells, and reading a newspaper without text. Questions and answers on the back include: What is wrong with this picture?

RA82763 Cognition Cards, Confrontational Naming

Confrontational Naming

Photo card deck of images of everyday objects such as an apple or book. Questions and answers on the back promote word finding skills. These questions include: What do you call this?

RA82765 Cognition Cards, Awareness & Safety

Awareness and Safety

Shows images of dangerous life situations, including riding a motorcycle without a helmet, swallowing a bottle of pills, eating moldy food, jaywalking, and eating with a knife. Questions and answers on the back include: 1) What is inappropriate about this situation?, 2) Why is this situation potentially dangerous?, 3) What would you do differently to prevent harm?
